

MAAME ABENA ADJABENG

Full Stack Developer

maameabenaadjabeng@gmail.com | +233 59 270 2543 | Accra, Ghana | github.com/Maamedtr | linkedin.com/in/maame-abena-adjabeng

SKILLS

Python, JavaScript, TypeScript, HTML, CSS, React, Node.js, PostgreSQL, MySQL, Supabase, Git, GitHub, Agile Development, Responsive Design, RESTful APIs, UI/UX Design, Front-end Architecture, Database Management, Back-end Architecture.

EXPERIENCE

Full Stack Developer

NASCO Feeding Minds – NascoTech | Accra, Ghana | Full-time, 11/2025 – Present

- Architected and deployed a full-stack volunteer registration platform featuring real-time form validation, dynamic multi-step workflows, and intuitive UIs, reducing registration completion time by 40% and increasing volunteer sign-ups by 65% through streamlined user experience and thoughtful micro-interactions.
- Rebuilt the team's personal portfolio site on a React and Vite architecture with Tailwind CSS and React Router, including a markdown-based blog system with no CMS dependency, replacing an earlier vanilla HTML/CSS/JS version.
- Contributed to a suite of 7 internal content management projects unified under a single SSO portal, working across authentication, access control, and shared front-end architecture for the organization's internal tools.
- Currently developing a sophisticated hair salon booking system with React front-end and Node.js/Express backend, implementing secure authentication, real-time availability tracking (reducing double-bookings to zero), automated appointment reminders (decreasing no-show rates by a projected 30%), and a polished admin dashboard for business management.
- Designed RESTful APIs with proper error handling, input validation, and scalable database schemas in MySQL, ensuring data integrity and optimal query performance with response times under 200ms across all applications.

Software Engineer (Front-end) Intern

Pharmacy Council Ghana – Information Systems Department | Accra, Ghana | 08/2023 – 09/2023

- Collaborated with the development team to redesign and optimize front-end interfaces for internal pharmaceutical management systems using HTML, CSS, and JavaScript, improving page load times by 35%.
- Improved user experience by implementing responsive design patterns and enhancing form validation workflows, reducing user errors by 45% by making interfaces more intuitive and accessible.
- Participated in code reviews and testing cycles, gaining practical experience with version control workflows and professional development practices in a government institution setting.

Software Engineer (Back-end) Intern

Ghana Cocoa Board (COCOBOD) – Information Systems Department | Accra, Ghana | 03/2024 – 05/2024

- Contributed to backend development for enterprise cocoa tracking and management systems, working with server-side logic, database queries, and API endpoints that processed 10,000+ daily transactions.
- Assisted in optimizing database queries and implementing data validation rules, improving query execution time by 25% and ensuring accuracy and integrity of agricultural production data across multiple facilities.

Cybersecurity Intern

Hacktify Cybersecurity – Virtual Internship Program | Remote | 02/2025

- Completed intensive virtual training modules covering cybersecurity fundamentals including threat identification, vulnerability assessment, and network security principles.
- Developed understanding of secure coding practices, common attack vectors (SQL injection, XSS, CSRF), and defensive programming techniques applicable to web application development.
- Applied a security-first mindset to personal projects, implementing input validation, authentication best practices, and data protection measures in full-stack applications.

PROJECTS

Hair Salon Booking System

Full-stack appointment management platform | In Development | [Frontend Repo](#) | [Backend Repo](#)

- Building a comprehensive booking system with a React front-end featuring dynamic calendar views, real-time slot availability, and animated transitions.
- Developing a Node.js/Express backend with RESTful API architecture, JWT authentication, MySQL database with optimized queries, and automated email/SMS notifications for appointment confirmations and reminders, plus Stripe payments and Google Calendar sync.
- Implementing role-based access control for customers, stylists, and administrators with distinct dashboards, business analytics, and service management capabilities expected to reduce administrative overhead by 50%.

Volunteer Registration Platform

Tech Stack: React, Node.js, Express, PostgreSQL | [GitHub Repository](#) | [Live Demo](#)

- Designed and deployed a multi-step volunteer registration system with real-time form validation, progress tracking, and smooth page transitions, achieving 40% faster completion times compared to traditional forms.
- Created intuitive UIs with attention to micro-interactions, loading states, and feedback mechanisms, resulting in a 65% increase in volunteer sign-ups.
- Built a scalable backend with proper error handling, data sanitization, and secure database operations ensuring volunteer information integrity with 99.9% uptime since deployment.

Personal Portfolio Website

Tech Stack: React, Vite, Tailwind CSS, React Router | [GitHub Repository](#) | [Live Demo](#)

- Built a fully responsive portfolio and blog site from scratch with React and Vite, showcasing projects, skills, and professional journey with a clean, editorial design aesthetic.
- Implemented a frontend-only, markdown-based blog system (no CMS) using import.meta.glob, with React Router handling client-side navigation.
- Ensured cross-browser compatibility and mobile-first responsive design for a consistent experience across all devices.

Graphic Designer Portfolio

Tech Stack: React, TypeScript, Vite, Supabase | [GitHub Repository](#) | [Live Demo](#)

- Built and deployed a client portfolio and work-gallery site for a graphic designer, with a Supabase-backed image gallery and lightbox viewer.
- Implemented an admin upload flow for the client to independently add new work to the gallery without code changes.

Digital Attendance Management System

Tech Stack: HTML, CSS, JavaScript, PHP, MySQL

- Developed a web-based attendance tracking system enabling real-time check-ins, automated reporting, and an administrative dashboard for monitoring attendance patterns and generating analytics, reducing manual attendance processing time by 80% and improving attendance accuracy by 95%.

EDUCATION

University of Ghana

Bachelor of Science in Information Technology | 11/2021 – 09/2025 | Accra, Ghana

Relevant Coursework: Data Structures, Algorithms, Web Development, Database Management Systems, Operating Systems, Network Security.
