MAAME ABENA ADJABENG

Full Stack Developer

maameabenaadjabeng@gmail.com | +233 59 270 2543 | Accra, Ghana | github.com/Maamedtr5 | linkedin.com/in/maame-abena-adjabeng

SKILLS

Python, JavaScript, TypeScript, HTML, CSS, React, Node.js, Express, PostgreSQL, MySQL, Prisma, Supabase, Git, GitHub, Agile Development, Responsive Design, RESTful APIs, JWT Authentication, API Rate Limiting, Swagger/OpenAPI, Jest, UI/UX Design, Front-end Architecture, Database Management, Back-end Architecture.

EXPERIENCE

Full Stack Developer

NASCO Feeding Minds – NascoTech | Accra, Ghana | Hybrid, 11/2025 – 09/2026

- Architected and deployed a full-stack volunteer registration platform featuring real-time form validation, dynamic multi-step workflows, and intuitive UIs, backed by a Node.js/Express API and PostgreSQL.
- Built the single sign-on (SSO) portal unifying a suite of 7 internal content management projects, working across authentication, access control, and shared architecture for the organization's internal tools.
- Designed RESTful APIs with proper error handling, input validation, and scalable database schemas in MySQL and PostgreSQL to maintain data integrity across applications.
- Produced the SRS and system design documents and a unified Prisma schema (PostgreSQL) covering five program modules: Scholarship, Beekeeping, Tree Planting, ICT, and Sports.
- Developed a hair salon booking system with a React front-end and Node.js/Express backend, implementing secure authentication, availability tracking, automated appointment reminders, and an admin dashboard.
- Rebuilt the team's portfolio site on React, Vite, Tailwind CSS and React Router, including a markdown-based blog system with no CMS dependency, replacing an earlier vanilla HTML/CSS/JS version.

Cybersecurity Intern

Hacktify Cybersecurity – Virtual Internship Program | Remote | 02/2025

- Completed virtual training modules covering cybersecurity fundamentals including threat identification, vulnerability assessment, and network security principles.
- Studied secure coding practices, common attack vectors (SQL injection, XSS, CSRF), and defensive programming techniques applicable to web application development.
- Applied a security-first mindset to personal projects, implementing input validation, authentication best practices, and data protection measures in full-stack applications.

Software Engineer (Back-end) Intern

Ghana Cocoa Board (COCOBOD) – Information Systems Department | Accra, Ghana | 03/2024 – 05/2024

- Contributed to backend development for enterprise cocoa tracking and management systems, working with server-side logic, database queries, and API endpoints for transaction processing.
- Assisted in optimizing database queries and implementing data validation rules to maintain the accuracy and integrity of agricultural production data across multiple facilities.

Software Engineer (Front-end) Intern

Pharmacy Council Ghana – Information Systems Department | Accra, Ghana | 08/2023 – 09/2023

- Collaborated with the development team to redesign and optimize front-end interfaces for internal pharmaceutical management systems using HTML, CSS, and JavaScript and streamlined with WordPress training for efficiency
- Implemented responsive design patterns and improved form validation workflows to make interfaces more intuitive and accessible.

- Participated in code reviews and testing cycles, gaining practical experience with version control workflows and professional development practices in a government institution setting.

PROJECTS

Hair Salon Booking System

Tech Stack: React, Node.js, Express, Prisma, PostgreSQL | *Frontend Repo* | *Backend Repo* | *Live API*

- Built a booking system with a React front-end featuring dynamic calendar views, real-time slot availability, and animated transitions.
- Developed a Node.js/Express backend with RESTful API architecture, JWT authentication with bcrypt password hashing, request rate limiting, Helmet security headers, express-validator input validation, and a PostgreSQL database managed with Prisma.
- Automated SMS (Twilio) and email (Resend) appointment reminders with scheduled node-cron jobs, plus Stripe payments and Google Calendar sync.
- Documented the API with Swagger/OpenAPI, added automated tests with Jest and Supertest, and hosted it on Vercel.
- Implemented role-based access control for customers, stylists, and administrators with distinct dashboards, business analytics, and service management capabilities.

Volunteer Registration Platform

Tech Stack: React, Node.js, Express, PostgreSQL | *GitHub Repository* | *Live Demo*

- Designed and deployed a multi-step volunteer registration system with real-time form validation and progress tracking.
- Built a backend with proper error handling, data sanitization, and secure database operations to protect volunteer information.

MUA & Crochet Portfolio

Tech Stack: React, Vite, TypeScript, Supabase (Postgres, Auth, Storage, Edge Functions) | *GitHub Repository* | *Live Demo* • Built a portfolio site for a makeup artist and crochet creator on Supabase with no standalone backend, using Postgres tables, row-level security, Auth and Storage buckets for images.

- Implemented an authentication-gated admin dashboard for managing gallery content and reviewing contact submissions.
- Built a Supabase Edge Function that saves contact-form submissions and emails them through Brevo, recording delivery failures for the admin.

Personal Portfolio Website

Tech Stack: React, Vite, Tailwind CSS, React Router | *GitHub Repository* | *Live Demo*

- Built a fully responsive portfolio and blog site from scratch with React and Vite, showcasing projects, skills, and professional journey with a clean, editorial design aesthetic.
- Implemented a front-end-only, markdown-based blog system (no CMS) using import. meta.glob, with React Router handling client-side navigation.
- Ensured cross-browser compatibility and mobile-first responsive design for a consistent experience across all devices.

Graphic Designer Portfolio

Tech Stack: React, TypeScript, Vite, Supabase | *GitHub Repository* | *Live Demo*

- Built and deployed a client portfolio and work-gallery site for a graphic designer, with a Supabase-backed image gallery and lightbox viewer.
- Implemented an admin upload flow for the client to independently add new work to the gallery without code changes.

Digital Attendance Management System

Tech Stack: HTML, CSS, JavaScript, PHP, MySQL

- Developed a web-based attendance tracking system enabling real-time check-ins, automated reporting, and an administrative dashboard for monitoring attendance patterns and generating analytics.

EDUCATION

University of Ghana
Bachelor of Science in Information Technology | 11/2021 – 09/2025 | Accra, Ghana

Relevant Coursework: Data Structures, Algorithms, Database Management Systems, Operating Systems, Network Security, Web Development.
